

Postern Gate

خفیہ دروازہ (پوسٹرن گیٹ)

1. Basic Facts

- Built by: Not documented in available sources
- Built in: Not documented; a secondary/subsidiary gate rather than one of the fort's grand ceremonial entrances
- Cost: Not documented
- Built for: A secondary, lesser-known access point into the fort, distinct from the main Akbari and Alamgiri Gates

2. Construction Details

- Materials: Not separately documented from the fort's general masonry construction
- Technique: Not documented in detail in available sources
- Artisans/craftsmen involved: Not documented
- Time taken: Not documented

3. Historical Background

- Little historical narrative is documented about this gate specifically compared with the fort's grand entrances - its main modern significance is as a subject of recent digital heritage documentation rather than a site of recorded historical events.
- It was recorded via high-resolution 3D laser scanning by the Factum Foundation in partnership with the Aga Khan Trust for Culture (AKTC), and the resulting scan was published as an openly viewable 3D model on Sketchfab, recorded by Amber Shahid Mumtaz of AKTC Pakistan.

4. Interesting Facts / Trivia

- This is one of the very few structures in Lahore Fort for which a fully open, freely browsable 3D digital model already exists online - most of the fort has not yet been published this way.
- This makes the Postern Gate a useful reference point for the AI Heritage Revive project's own landmark-recognition and 3D-reconstruction ambitions, since it shows what a completed open digital scan of a fort structure actually looks like.

5. Scenario / Narrative Moment

A modest side gate that history books mostly walked past now exists, ironically, as one of the most precisely documented corners of the entire fort - captured point by point in a laser scan, freely viewable on a screen anywhere in the world, long after the guards who once used it have been forgotten.
